Foreword

25 This is a supplement to the IHE Patient Care Coordination Technical Framework V7.0. Each supplement undergoes a process of public comment and trial implementation before being incorporated into the volumes of the Technical Frameworks.

30 This supplement is different than traditional IHE supplements. It serves as the Trial Implementation staging area for content modules. The content modules (section level, entry level) defined during Trial Implementation are gathered in this document to provide a central location for readers of supplements from PCC, QRPH and/or other domains that use the dictionary of content modules first defined by PCC. After individual modules are successfully tested and reviewed, they will be moved to Final Text. At that time, they are removed from this document. Thus, this supplement will continue to exist for some time as new content modules are defined and documented here. Likewise, content modules will be removed as they go to final 35 text.

This supplement describes changes to the existing technical framework documents and where indicated amends text by addition (**bold underline**) or removal (**~~bold strikethrough~~**), as well as addition of large new sections introduced by editor's instructions to "add new text" or similar, which for readability are not bolded or underlined.

40 "Boxed" instructions like the sample below indicate to the Volume Editor how to integrate the relevant section(s) into the relevant Technical Framework volume:

Replace Section X.X by the following:

690 **Introduction**

This supplement is written for Trial Implementation. It is written as changes to the documents listed below. The reader should have already read and understood these documents:

1. [PCC Technical Framework Volume 1, Revision 7.0](#)
2. [PCC Technical Framework Volume 2, Revision 7.0](#)

695 This supplement also references other documents¹. The reader should have already read and understood these documents:

1. [IT Infrastructure Technical Framework Volume 1, Revision 8.0](#)
2. [IT Infrastructure Technical Framework Volume 2, Revision 8.0](#)
3. [IT Infrastructure Technical Framework Volume 3, Revision 8.0](#)
4. [The Patient Identifier Cross-Reference \(PIX\) and Patient Demographic Query \(PDQ\) HL7 v3 Supplement to the IT Infrastructure Technical Framework.](#)
5. HL7 and other standards documents referenced in Volume 1 and Volume 2

700 This supplement defines a number of PCC content modules that are shared between various content documents. These are provided for trial implementation and will be published in the same format for Trial Implementation. Upon completion, some content modules will be moved to Final Text; others may remain in Trial Implementation.

Volume 1 – Integration Profiles

715 **Glossary**

<i>Add the following terms to the Glossary:</i>

2.5 History of Annual Changes

720

<i>Add the following bullet to the end of the bullet list in Section 2.5</i>
--

- Added a set of CDA Content Modules shared across several Integration Profiles for the 2010-2011 documentation cycle.
- In the 2011-2012 documentation cycle, the following CDA Section Content Modules were added as well as various Entry Content Modules and Value Sets:

725 • PCC Transport Summary Profiles supplement

- Sending Facility
- Receiving Facility
- Mass Causality Incident
- Unit Response Level

730 • Protocols Used
• Extra Attendants Information
• Invasive Airway

- Isolation Status
- Restraints

735 • Ventilator Usage
• Provider Level
• QRPH EHCP Profile

- Risk Indicators for Hearing Loss
- Hearing Screening Coded Results

740 • QRPH PRPH-Ca Profile
• Cancer Diagnosis

Volume 2 – Transactions and Content Modules

745

Add Section 6.1

6.1 Conventions

750 Various tables used in this section will further constrain the content. Within this volume, the follow conventions are used.

R

755 A "Required" data element is one that shall always be provided. If there is information available, the data element must be present. If there is no information available, or it cannot be transmitted, the data element must contain a value indicating the reason for omission of the data. (See PCC TF-2: 5.3.4.2 for a list of appropriate statements).

R2

760 A "Required if data present" data element is one that shall be provided when a value exists. If the information cannot be transmitted, the data element shall contain a value indicating the reason for omission of the data. If no such information is available to the creator or if such information is not available in a well identified manner (e.g., buried in a free form narrative that contains additional information relevant to other sections) or if the creator requires that information be absent, the R2 section shall be entirely absent. (See Section PCC TF-2: 5.3.4.2 for a list of appropriate statements).

O

765 An optional data element is one that may be provided, irrespective of whether the information is available or not. If the implementation elects to support this optional section, then its support shall meet the requirement set forth for the "Required if data present" or R2.

C

770 A conditional data element is one that is required, required if known, or optional depending upon other conditions. These will have further notes explaining when the data element is required, et cetera.

Note: The definitions of R, R2, and O differ slightly from other IHE profiles. This is due in part to the fact that local regulations and policies may in fact prohibit the transmission of certain information, and that a human decision to transmit the information may be required in many cases.

775

Add Section 6.2

6.2 Folder Content Modules

- 780 This section contains modules that describe the content requirements of Folders used with XDS, XDM or XDR. When workflows are completed normally, the folders will contain documents with the optionality specified in the tables shown below. Under certain circumstances, the folders will not meet the optionality requirements described below, for example, when the patient leaves before treatment is completed.

6.3 HL7 Version 3.0 Content Modules

- 790 This section contains content modules based upon the HL7 CDA Release 3.0 Standard, and related standards and/or implementation guides.

6.3.1 CDA Document Content Modules

Add Section 6.3.1.X

795 **6.3.1.X History and Physical Specification 1.3.6.1.4.1.19376.1.5.3.1.1.16.1.4**

The History and Physical document content module is a Medical Summary and inherits all header constraints from Medical Summary (1.3.6.1.4.1.19376.1.5.3.1.1.2). The intention of this document content module is to provide a base from which other document content modules may be derived. Future work may also result in a content profile for History and Physical.

800 **6.3.1.x.1 Format Code**

The XDSDocumentEntry format code for this content is **urn:ihe:pcc:hp:2008**

6.3.1.x.2 LOINC Code

The LOINC code for this document is **34117-2 HISTORY AND PHYSICAL**

6.3.1.x.5 Conformance

815

CDA Release 2.0 documents that conform to the requirements of this content module shall indicate their conformance by the inclusion of the appropriate <templateId> elements in the header of the document. This is shown in the sample document below. A CDA Document may conform to more than one template. This content module inherits from the [Medical Summaries](#) content module, and so must conform to the requirements of that template as well, thus all <templateId> elements shown in the example below shall be included.

Add Section 6.3.2.5

6.3.2.5 Spouse 1.3.6.1.4.1.19376.1.5.3.1.2.4.1

925 The spouse header element records the spouse of a patient, and inherits other constraints from the [Patient Contacts](#) entry. Items in bold in the example below show the additional constraints on this element.

930 This element SHALL be included as a participant in the header of the CDA document in the event of the pregnancy. If this does not apply to the patient this element SHALL use a null flavor.

6.3.2.5.1 Parent Template

The parent of this template is [Patient Contacts](#).

6.3.2.5.2 Specification

1060 *Add Section 6.3.2.7*

6.3.2.7 Authorization 1.3.6.1.4.1.19376.1.5.3.1.2.5

Each <authorization> element in the CDA Header represents an informed consent. When the document being shared represents the informed consent to a policy expressed by the XDS Affinity Domain within the document, it shall do so in an <authorization> element. More than one <authorization> element may be present. The consent to share information shall have a unique identifier contained in the <id> element, representing the patient consent to that policy. The policy being consented to shall be represented in the <code> element. Note that other <authorization> elements may be present representing other sorts of consents associated with the document.

General Description	This section contains the physician's best estimate of the patients due date. This is generally done both on an initial evaluation, and later confirmed at 18-20 weeks. The date is supported by evidence such as the patients history of last menstrual period, a physical examination, or ultrasound measurements.

1.3.6.1.4.1.19376.1.5.3.1.1.11.2.3.1	R	<p>Estimated Delivery Date Observation</p> <p>This is a simple observation to represent the estimated due date with a supporting observation or observations that state the method used and date implied by that method. If one observation is present, then it is to be interpreted as the initial EDD. If the initial observation dates indicate the EDD is within the 18 to 20 weeks completed gestation, that observation will also populate the 18-20 week update. If the initial observation indicates an EDD of more than 20 weeks EGA, then no value will be placed in the 18-20 week update field.</p>

It can be supported by patient history (eg last menses or quickening), physical examination findings (uterine size), or Ultrasound. The observation is a Simple Observation with a supporting entryRelation of another Observation. The supporting observation may in turn have a entryRelation that gives the original observation as a gestational age or date from which the estimated due date is calculated.

6.3.4.35.1.1 <act classCode='ACT' moodCode='INT|EVN'>

The disposition is recorded in an act element, to describe the disposition action taken during the encounter¹. In intent mood (moodCode='INT'), this records the expected disposition of the patient. In event mood (moodCode='EVN'), this records the actual disposition.

¹ The HL7 RIM allows this portion of the encounter to be recorded in the dischargeDispositionCode RIM Attribute of the Encounter class, but the Encounter class is constrained within CDA. To record the disposition act therefore requires the use of the Act class.

6.3.4.35.1.2 <templateId root='1.3.6.1.4.1.19376.1.5.3.1.1.10.4.2' />

The templateId indicates that this <encounter> entry conforms to the constraints of this content module.

3695 This required element shall contain an identifier.

6.3.4.35.1.4 <code code="" displayName="" codeSystem="" codeSystemName="" />

- 3700 This required element indicates the disposition of the patient. The code shall come from a coding system that is able to record common patient dispositions (e.g., Discharged, Transferred, Admitted). The "Administrative Procedure" concept (14734007) of SNOMED CT contains several code values that cover a wide variety of dispositions routinely recorded. Other vocabularies that are commonly in use to describe discharge disposition codes are DEEDS (See section 8.02), and in the US, the Uniform National Billing Code.

- 3705 The <text> element shall contain a reference to the narrative text describing the disposition of the patient. <statusCode code='normal|completed' /> When the disposition act has occurred (moodCode='EVN'), the statusCode element shall be present, and shall contain the value 'completed'. When the disposition act is intended (moodCode='EVN') the statusCode element shall contain the value 'normal'.

6.3.4.35.1.6 <effectiveTime><low value="/" /><high value="/" /><effectiveTime/>

- 3710 When the disposition has occurred, this element shall be sent, and indicates the effective time for the disposition process. This element may be sent to record when the disposition act is intended to occur. The <low> element records the time at which the disposition process was started. The <high> value records the time at which the disposition process was completed.

6.3.4.35.1.7 <performer typeCode='PRF' />

- 3715 The <performer> element provides information about the person that performs the discharge, admission or transfer of the patient. 3985 **codeSystem='2.16.840.1.113883.6.96' codeSystemName='SNOMED CT' />**

The <code> element indicates what kind of pain observation was made. It shall contain the code and codeSystem attribute values shown above. The <translation> element may be present, and provides a mapping to SNOMED CT of the observation. If present, is shall have the code and codeSystem attribute values shown above.

6.3.4.38.5 <value xsi:type='CO' value=' ' />

The <value> element records the assessed pain score. If using the NRS the pain is assessed using coded ordinal values that range from 0 to 10. The use of the coded ordinal type is required because while pain assessments are ordered values, and can be compared, the differences between two pain assessment values cannot be compared, and so these values are not really numbers.

The <interpretationCode> element should be present to provide an interpretation of the pain scale assessment using SNOMED CT. When the <interpretationCode> element is present, the <translation> element described above shall be present. These interpretations are provided to assist decision support systems that are making secondary use of the assessment information, and are not intended to replace the score values.

Pain Score Range	Code	Description

4010 The <methodCode> should not be present in a Pain Score Observation, as the method is implied by the <code> element.

6.3.4.38.8 <targetSiteCode code=' ' codeSystem=' ' codeSystemName=' '/>

The <targetSiteCode> element should be present, and shall indicate the location of the pain being assessed.

This content module is derived from the Medication content module to specifically and more easily describe the necessary details of intravenous fluid administration. For the purpose of EDER and other profiles employing this content module, the table below identifies and describes the fields and constraints on whether or not they are required to be sent. The fields are listed in the order that they appear in the CDA XML content.

6.3.4.46.1.1 Medication Fields

Field	Opt.	CDA Tag	Description
Start and Stop Date	R2	<effectiveTime>	The date and time when the fluid regimen began and is expected to finish. The first component of the <effectiveTime> encodes the lower and upper bounds over which the <substanceAdministration> occurs,

			and the start time is determined from the lower bound. If the fluid has been known to be stopped, the high value must be present, but expressed as a flavor of null (e.g., Unknown).
Dose	R2	<doseQuantity>	The amount of fluid given. This should be in some known and measurable fluid unit, such as milliliters, or may be measured in "administration" units (such "units" of blood or "packs" of platelets).
Site	O	<approachSiteCode>	The site where the fluid is administered (i.e. "Left Antecubital", or "Central Line").
Rate	R2	<rateQuantity>	The rate is a measurement of how fast the fluid is given to the patient over time (e.g., .5 liter / 1 hr).
Product	R	<consumable> <name> </consumable>	The name of the substance or product. This should be sufficient for a provider to identify the type of fluid. It may be a trade name (Plasmalyte®) or a generic name. This information is required in all fluid entries. The name should not include packaging, strength or dosing information.
Code	R2	<consumable> <code/> </consumable>	A code describing the product from a controlled vocabulary, such as RxNorm, First DataBank, et cetera.

6.3.4.46.1.2 <substanceAdministration classCode='SBADM' moodCode='INT|EVN'>

4210

The general model is to record each fluid administered in a <substanceAdministration> intent (moodCode='INT'). Fluids that have been started but not completely administered should be recorded in a <substanceAdministration> intent (moodCode='INT'). Fluids that have been completed should be recorded as an event (moodCode='EVN').

4215

<templateId root='2.16.840.1.113883.10.20.1.24'> <templateId root='1.3.6.1.4.1.19376.1.5.3.1.4.7'> <templateId root='1.3.6.1.4.1.19376.1.5.3.1.4.7.1' />

All intravenous fluid entries use the <templateId> elements specified above to indicate that they are IV fluid administration acts. This element is required.

4220

6.3.4.46.1.4 <id root=" extension="/">

The <substanceAdministration> element must be uniquely identified. If there is no explicit identifier for this observation in the source EMR system, a GUID may be used for the root attribute, and the extension may be omitted. Although HL7 allows for multiple identifiers, this Technical Framework profile requires that one and only one be used.

4225

6.3.4.46.1.5 <code code="" displayName="" codeSystem="" codeSystemName="">

The <code> element is required, and is used to supply a code that describes the act of fluid administration, not the fluid being administered. This may be a procedure code, such as those found in CPT-4 (and often used for billing), or may describe the method of administration, such as by intravenous injection.

4230 **6.3.4.46.1.6 <text><reference value="/"></text>**

The URI given in the value attribute of the <reference> element points to an element in the narrative content that contains the complete text describing the fluid administration.

6.3.4.46.1.7 <statusCode code='completed|active' />

4235 The status of all <substanceAdministration> elements must be "completed" or "active". If "completed", then the administration has occurred, or the request or order has been placed. If "active", then at the time recorded, the fluid was still being administered.

6.3.4.1.46.8 <effectiveTime xsi:type='IVL_TS'>

4240 The first <effectiveTime> element encodes the start and stop time of the administration. This is an interval of time (xsi:type='IVL_TS'), and must be specified as shown. This is an additional constraint placed upon CDA Release 2.0 by this Technical Framework profile, and simplifies the exchange of start/stop and frequency information between EMR systems.

6.3.4.46.1.9 <low value="/"><high value="/">

4245 The <low> and <high> values of the first <effectiveTime> element represent the start and stop times for the fluid administration. The <low> value represents the start time, and the <high> value represents the stop time. If either the <low> or the <high> value is unknown, this shall be recorded by setting the nullFlavor attribute to UNK. The <high> value records the end of the fluid administration according to the information provided in the initial fluid order or RN documentation. For example, if the fluid order is for one liter, and the fluid is to be delivered at 250 mL/hr, then the high value should contain a datetime that is 4 hours later than the <low> value. The rationale is that a provider, seeing a discontinued fluid could normally assume that the fluid has been stopped, even if the intent of the treatment plan is to continue the fluid continuously.

4255 **6.3.4.46.1.10 <approachSiteCode code=" codeSystem="">
originalText><reference value="/"></originalText>
</approachSiteCode>**

The <approachSiteCode> element contains a URI in the value attribute of the <reference> that points to the text in the narrative identifying the site. It may be coded to a controlled vocabulary that lists such sites (e.g., SNOMED-CT).

4260 **6.3.4.46.1.11 <doseQuantity><low value=" unit="/"><high value=" unit="/">
</doseQuantity>**

The dose is specified if the <doseQuantity> element. If a dose range is given (e.g., 125-250 mL/hr [i.e. to replace fluid losses]), then the <low> and <high> bounds are specified in their respective elements, otherwise both <low> and <high> have the same value. The unit attribute should be derived from the HL7 UnitsOfMeasureCaseSensitive vocabulary .

4265 **6.3.4.46.1.12 <low|high value=""> <translation> <originalText><reference value="/"></originalText> </translation></low|high >**

Any <low> and <high> elements used for <doseQuantity> or <rateQuantity> should contain a <translation> element that provides a <reference> to the <originalText> found in the narrative body of the document .

4270 **6.3.4.46.1.13 <rateQuantity><low value="" unit="/"><high value="" unit="/"></rateQuantity>**

The rate is specified in the <rateQuantity> element. The rate is given in units that have measure over time. In this case, the units should be specified as a string made up of a unit of measure (see doseQuantity above), followed by a slash (/), followed by a time unit (s, min, h or d) (i.e. mL/hr).

4275 Again, if a range is given, then the <low> and <high> elements contain the lower and upper bound of the range, otherwise, they contain the same value.

6.3.4.46.1.14 <consumable>

The <consumable> element shall be present, and shall contain a <manufacturedProduct> entry conforming to the Product Entry template (see PCC TF-2: 6.3.4.19).

6.3.4.50 Alert Entry 1.3.6.1.4.1.19376.1.5.3.1.4.12.3

4515 The alert entry is an observation whose subject is any clinical statement. This entry provides additional information about a clinical statement that may be of relevance to the care being described. For example, some treatments may be contraindicated by other conditions or co-occurring treatment. For example, the use of aspirin and a blood thinning agent at the same time may not be recommended. The alert entry is provided to record these annotations. An example use of this entry is in a clinical decision support service that uses the alert entry to identify vaccinations that are considered to be of reduced effectiveness when making immunization recommendations for the patient. Another example of this use in a similar system would be to identify treatments that are contraindicated subsequent to an immunization.

4535 **6.3.4.50.3 <observation classCode='OBS|ALRT' moodCode='EVN'>**

An alert is an observation that has occurred (moodCode=EVN). The HL7 classCode value of ALRT shall be used where permitted (e.g. in an HL7 Care Record message). Where not permitted, the classCode shall be OBS (e.g., in CDA Document).

6.3.4.50.4 <id root=" extension="/>

6.3.4.50.6 <text><reference value="#ref-1"/></text>

4550 The text of the observation should provide some human readable explanation for the alert. In a CDA document, this would appear within the narrative of the clinical document, and so would be referenced by the alert. In an HL7 Version 3 message, this text would appear in the **<text>** element of the alert entry.

These acts are observations that form the care plan or which can be used in decision support. In intent mood (moodCode='INT') these are what is intended to be performed as part of the care plan. In proposal mood (moodCode='PRP'), these observations are being proposed, for example, as the output of a clinical decision support system. In goal mood (moodCode='GOL'), these observations described the intended goal of a treatment plan.

6.3.4.54.2.2 <templateId root='1.3.6.1.4.1.19376.1.5.3.1.1.20.3.1'>

4655 The <templateId> element identifies this <observation> as an observation request, allowing for validation of the content. The templateId must appear as shown above.

6.3.4.54.2.3 <templateId root=2.16.840.1.113883.10.20.1.25'>

The IHE Observation Request template conforms to the Plan of care activity defined by the HL7 Continuity of Care Document. This template id must be present to indicate conformance.

4660 6.3.4.54.2.4 <id root=' ' extension=' '/>

Each observation shall have an identifier.

6.3.4.54.2.5 <code code=' ' displayName=' ' codeSystem=' ' codeSystemName=' '/>

Observations shall have a code describing what is to be measured. The code system used is determined by the vocabulary constraints on the types of measurements that might be recorded in a section. Modules that are derived from the this one may restrict the code system and code values used for the observation.

6.3.4.54.2.6 <text><reference value="#xxx"/></text> -OR- <text>text</text>

4670 Each observation request entry may contain a <text> element providing the free text that provides the same information as the observation within the narrative portion of the document with a <text> element. For CDA based uses of Observation Requests, this element SHALL be present, and SHALL contain a <reference> element that points to the related string in the

narrative portion of the document. For HL7 Version 3 based uses, the <text> element MAY be included.

6.3.4.54.2.7 <statusCode code='active' />

- 4675 The <statusCode> element shall be present and shall describe the current state of the observation. Goals, intents and proposals that are available for action shall have an 'active' status, but other status values are permitted.

6.3.4.54.2.8 <effectiveTime value=' '/>

- 4680 The <effectiveTime> element shall be present in observation requests to indicate the date and time when the measurement should be taken.

6.3.4.54.2.9 <value xsi:type=' ' .../>

The value of the observation may be recorded using a data type appropriate to the observation to indicate the desired value (e.g., in GOL or PRP mood).

6.3.4.54.2.10 <methodCode code=' ' codeSystem=' ' codeSystemName=' '/>

- 4685 The methodCode element may be used to record the specific method used to make an observation when this information is not already pre-coordinated with the observation code.

6.3.4.54.2.11 <targetSiteCode code=' ' codeSystem=' ' codeSystemName=' '/>

The targetSiteCode may be used to record the target site where the observation should be made when this information is not already pre-coordinated with the observation code.

In CDA uses, the observation request is assumed to be authored by the same author as the document through context conduction. However, observation requests would often be used to record orders, and in these cases, the author of the order shall be recorded in the author element.

- 4695 For HL7 Version 3 purposes, the <author> element SHOULD be present unless it can be determined by conduction from organizers or higher level structures. When used for HL7 Version 3 the role element name is <assignedEntity> and the author is represented a <assignedPerson> element.
