IHE Radiation Oncology Technical Framework Supplement

10

Deformable Registration in Radiation Oncology (DRRO)

15

Revision 1.1 – Trial Implementation

20

Date: April 13, 2022
Author: IHE Radiation Oncology Technical Committee
Email: ro@ihe.net

25

Please verify you have the most recent version of this document. See [here](#) for Trial Implementation and Final Text versions and [here](#) for Public Comment versions.

Foreword

- This is a supplement to the IHE Radiation Oncology Technical Framework V2.0. Each
30 supplement undergoes a process of public comment and trial implementation before being incorporated into the volumes of the Technical Frameworks.
- This supplement is published on April 13, 2022 for trial implementation and may be available for testing at subsequent IHE Connectathons. The supplement may be amended based on the results of testing. Following successful testing it will be incorporated into the Radiation Oncology
35 Technical Framework. Comments are invited and can be submitted at [Radiation Oncology Public Comments](#).

This supplement describes changes to the existing technical framework documents.

“Boxed” instructions like the sample below indicate to the Volume Editor how to integrate the relevant section(s) into the relevant Technical Framework volume.

- 40 ***Amend Section X.X by the following:***

Where the amendment adds text, make the added text **bold underline**. Where the amendment removes text, make the removed text **bold strikethrough**. When entire new sections are added, introduce with editor’s instructions to “add new text” or similar, which for readability are not bolded or underlined.

- 45

General information about IHE can be found at [IHE.net](#).

Information about the IHE Radiation Oncology domain can be found at [IHE Domains](#).

Information about the organization of IHE Technical Frameworks and Supplements and the process used to create them can be found at [Profiles](#) and [IHE Process](#).

- 50 The current version of the IHE Radiation Oncology Technical Framework can be found at [Radiation Oncology Technical Framework](#).

Introduction to this Supplement

155 The DRRO Profile defines the content necessary for exchanging DICOM Deformable Spatial Registration (DSR) objects between radiation oncology systems. In addition to defining the data required to accomplish deformable image registration, it provides requirements on data elements so that DSR objects can be appropriately handled by radiation oncology systems that test to this profile.

Open Issues and Questions

#	Introduced in	Description
1		Is there a usage for (0064,0010) Post Deformation Matrix?
2		Use case “Dose compositor” partially overlaps with DCOM. The use case involves a Dose Actor and a Dose Compositor Actor. The latter is the same as in DCOM. Do we include this use case (as well the Dose Compositor Actor) in DRRO and how do we differentiate? Include, but make sure that it is reflected in the resulting RT Dose. 2019-03-19: There appear to be some limitations in the current DICOM standard preventing storage with relevant references for the Deformable Dose Compositor.
3		Should Use cases “Deformable registration creation” and “Deformable registration editing” be separate use cases or do we merge and use “optional” for consumption of Deformable Spatial Registration Object? 2018-02-04: Not clear if Use case “Deformable registration editing” corresponds to any current clinical product. The use case is retained as a placeholder.
4		Contourer Actor is described as propagation of structures but for the use cases also used to describe the action of contouring in fusion view. Should we introduce one more actor (Fusion View Contourer Actor)?
5		Do we introduce prerequisites on the RT Dose objects considered (axial)??
6		2019-03-18: Handling of Fiducial (0070,0314 “Used Fiducial Sequence”) was discussed. This is an Open Issue – could be handled as a Profile Option. The idea would be to use the reference structures (regions and/or points of interest) which have been used to guide the deformable registration algorithm.
7		2019-09-09: Deformable Dose Compositor Actor and deformable compositing planning are moved to later versions of the profile.
8		2020-10-07: Patient Position in the case of PET should be discussed. Expression of patient position in PET is different than the historical way of expressing it in MR and CT. Check this profile and dependent profiles on patient position restrictions
9		2020-10-09: Are differences in orientation to gravity properly handled in DSRO and deformed images?

#	Introduced in	Description
10		<p>2020-10-09:</p> <ul style="list-style-type: none"> • Use cases not described above but which have been discussed: <ul style="list-style-type: none"> ◦ Use case: Deformable Registration Comparison A device can display the differences between deformable registrations. The difference here between straight dose comparison is that it can accept the deformable registration and the data that composes it. The actors for this use case may not be different from actors suggested by other use cases (deformable dose compositing, displaying) except that it may have a comparison component and the ability to display deltas with side by side dose displays. ◦ Surgery Use Case: Resection Cavity Correction (Intra-Op Update) • Any interest / relevance to add use case for diagnostic PET/CT planning CT contouring in fusion / contour propagation [deformable registration between diagnostic CT and planning CT, while diagnostic PET and planning CT used for fusion / propagation]? • Resampling (images, structures, and dose) is outside the scope of the DRRO Profile. This should be pointed out clearly in the description.

160

Closed Issues

#	Introduced in	Section #	Issue	Description
1	1.0, Public comments	7.4.1.7.1.1	This <u>should</u> be used for Registered RCS	Changed should to shall
2	1.0, Public comments	7.4.1.9.2.2	On the higher level we should describe what we are trying to achieve: the deformed structure set should reference both the non-deformed source structure set and the deformable registration that was used in the deformation.	With reference to TC meeting April 15, 2021: Additional requirements for derivation codes and referenced source instances in RT Structure Set have been removed (section 7.4.1.9.2.2) since they may not be applicable to all ROIs in the RT Structure Set.
3	1.0, Public comments	7.4.1.9.2.2	The codes are incorrect (according to the standard): (DCM, 125027, ‘Deformed for Registration’) is used for the derivation code for the deformed structure set (DCM, 125028, ‘Source Deformable Spatial Registration’) is used for the Purpose of Reference Code for the deformable registration used.	With reference to IHE-RO TC meeting April 15, 2021: Additional requirements for derivation codes and referenced source instances in RT Structure Set have been removed (section 7.4.1.9.2.2) since they may not be applicable to all ROIs in the RT Structure Set.

IHE Radiation Oncology Technical Framework Supplement – Deformable Registration in Radiation Oncology (DRRO)

#	Introduced in	Section #	Issue	Description
4	1.0, Public comments	7.4.1.9.2.2	Where do we put the source structure set? Should it also be in the Source Instance Sequence (0042,0013) or in the Predecessor Structure Set Sequence (3006,0018)?	With reference to TC meeting April 15, 2021: Additional requirements for derivation codes and referenced source instances in RT Structure Set have been removed (section 7.4.1.9.2.2) since they may not be applicable to all ROIs in the RT Structure Set.
5	1.0, Public comments	7.4.15.1.1.2	Frame of reference identity (125021) should be one of the registration type codes and <u>mandatory</u> for the identity registration sequence	With reference to TC meeting April 15, 2021: Agreement that Frame of Reference Identity code (125021) is to be used for the identity transformation. A CP to require this code for rigid registrations in the MMRO-* Profile is to be drafted as well
6	1.0, Public comments	7.4.15.1.1.2	What about 'NaN's in the Vector Grid Data? They should be explicitly not allowed.	With reference to TC meeting April 15, 2021: NaN values are to be allowed in the deformation map. Consuming actors must handle NaN values safely.
7	1.0, Public comments	7.4.15.1.1.2	Should Content Creator's Name (0070,0084) be mandatory?	With reference to TC meeting April 15, 2021: It is appropriate that Content Creator's Name attribute is Type 2 (accommodates automated use case).
8	1.0, Public comments	"general"	If deformable process involves objects (contours/ROI/points) that affect deformation, it can be difficult to analyze the deformable registration without this information.	With reference to TC meeting April 15, 2021: Metadata regarding deformation process and parameters is not adequately captured by the DICOM Standard. Conveying this meta-information is currently outside the scope of the DRRO Profile. See #6 under Open Issues.

IHE Technical Frameworks General Introduction

165 The [IHE Technical Frameworks General Introduction](#) is shared by all of the IHE domain technical frameworks. Each technical framework volume contains links to this document where appropriate.

9 Copyright Licenses

170 IHE technical documents refer to, and make use of, a number of standards developed and published by several standards development organizations. Please refer to the IHE Technical Frameworks General Introduction, [Section 9 - Copyright Licenses](#) for copyright license information for frequently referenced base standards. Information pertaining to the use of IHE International copyrighted materials is also available there.

IHE Technical Frameworks General Introduction Appendices

- 180 The [IHE Technical Framework General Introduction Appendices](#) are components shared by all of the IHE domain technical frameworks. Each technical framework volume contains links to these documents where appropriate.

185 *Update the following appendices to the General Introduction as indicated below. Note that these are **not** appendices to this domain's Technical Framework (TF-1, TF-2, TF-3 or TF-4) but rather, they are appendices to the IHE Technical Frameworks General Introduction located [here](#).*

[Appendix A – Actors](#)

- 190 Add the following **new or modified** actors to the [IHE Technical Frameworks General Introduction Appendix A](#):

New (or modified) Actor Name	Description
Deformable Registrar	A system that consumes multi-modality images and generates deformable registrations.
Deformable Displayer	A system that consumes multi-modality images, structure sets and deformable registrations to display the registered information. The producer of the deformable registration is expected to be a Deformable Registrar .
Contour Deformer	A system that consumes multi-modality images, structure sets and deformable registrations to generate deformed structure sets in a Deformable Displayer .
Dose Deformer	A system that consumes multi-modality images, structure sets, dose and deformable registrations to generate deformed dose objects in a Deformable Displayer .
Image Deformer	A system that consumes multi-modality images, structure sets, and deformable registrations to generate deformed images in a Deformable Displayer .

195

200

Appendix B – Transactions

*Add the following **new or modified** transactions to the [IHE Technical Frameworks General Introduction Appendix B](#):*

205

New (or modified) Transaction Name and Number	Definition
Deformable Registration Storage [RO-DRRO-1]	Storage of Deformable Registration Object instances.
Deformable Registration Retrieval [RO-DRRO-2]	Retrieval of Deformable Registration Object instances.

Appendix D – Glossary

210

*Add the following **new or modified** glossary terms to the [IHE Technical Frameworks General Introduction Appendix D](#):*

New (or modified) Glossary Term	Definition	Synonyms	Acronym/Abbreviation

7 Deformable Registration for Radiation Oncology (DRRO) Profile

This Integration Profile specifies how images, RT Structure Sets, RT Doses, and associated deformable registration information can be exchanged, stored, processed, and displayed. The use of relevant DICOM objects (Deformable Spatial Registration) is clarified and constrained in order to avoid misinterpretations.

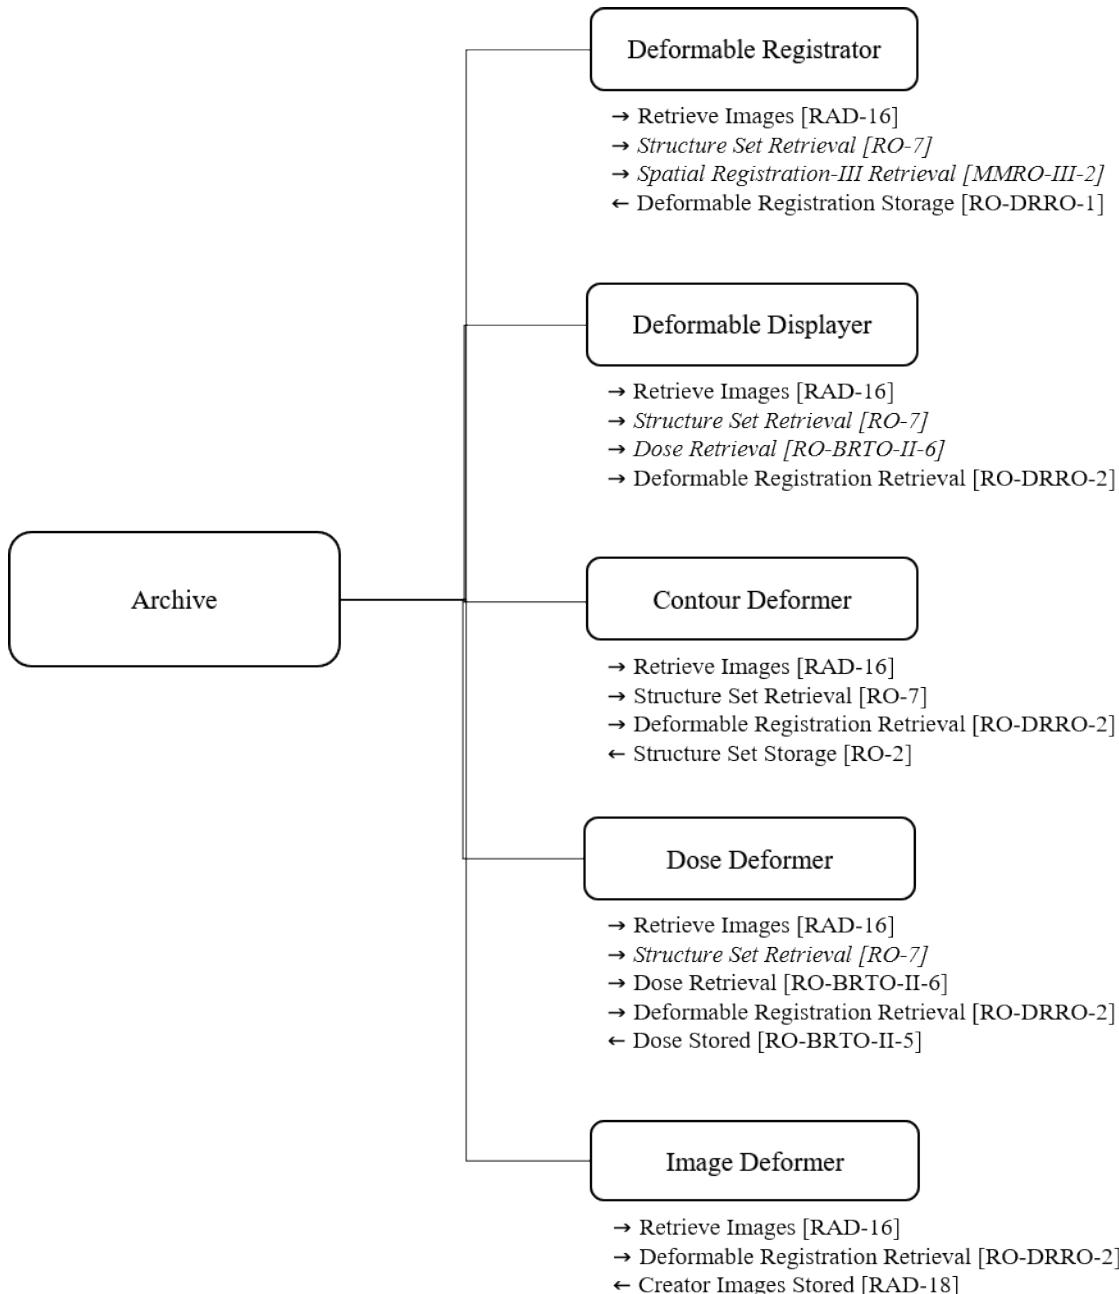

225

The *Deformable Registration for Radiation Oncology (DRRO) Profile* is a Workflow and Content Module profile. The focus is both on a registration workflow and content for image registration and deformation of structure sets and images.

7.1 DRRO Actors, Transactions, and Content Modules

230

Figure 7.1-1 shows the actors directly involved in the DRRO Profile and the relevant transactions between them. If needed for context, other actors that may be indirectly involved due to their participation in other related profiles are shown in dotted lines. Actors which have a mandatory grouping are shown in conjoined boxes.

235

Figure 7.1-1: DRRO Actor Diagram

240

Table 7.1-1 lists the transactions for each actor directly involved in the DRRO Profile. In order to claim support for this profile, an implementation of an actor must perform the required transactions (labelled “R”) and may support the optional transactions (labeled “O”). Actor groupings are further described in Section 7.6.

Table 7.1-1: DRRO Profile – Actors and Transactions

Actors	Transactions	Optionality	Reference
Deformable Registrar	Retrieve Images [RAD-16]	R	RAD TF-2: 4.16
	Structure Set Retrieval [RO-7]	O	RO TF-2: 3.7
	Spatial Registration-III Retrieval [MMRO-III-2]	O	RO TF-2: 3.18
	Deformable Registration Storage [RO-DRRO-1]	R	RO TF-2: 7.1
Deformable Displayer	Retrieve Images [RAD-16]	R	RAD TF-2: 4.16
	Structure Set Retrieval [RO-7]	O	RO TF-2: 3.7
	Dose Retrieval [RO-BRTO-II-6]	O	RO TF-2: 3.11
	Deformable Registration Retrieval [RO-DRRO-2]	R	RO TF-2: 7.2
Contour Deformer	Retrieve Images [RAD-16]	R	RAD TF-2: 4.16
	Structure Set Retrieval [RO-7]	R	RO TF-2: 3.7
	Deformable Registration Retrieval [RO-DRRO-2]	R	RO TF-2: 7.2
	Structure Set Storage [RO-2]	R	RO TF-2: 3.2
Image Deformer	Retrieve Images [RAD-16]	R	RAD TF-2: 4.8
	Deformable Registration Retrieval [RO-DRRO-2]	R	RO TF-2: 7.2
	Creator Images Stored [RAD-18]	R	RAD TF-2: 4.18
Dose Deformer	Retrieve Images [RAD-16]	R	RAD TF-2: 4.16
	Structure Set Retrieval [RO-7]	O	RO TF-2: 3.7
	Dose Retrieval [RO-BRTO-II-6]	R	RO TF-2: 3.11
	Deformable Registration Retrieval [RO-DRRO-2]	R	RO TF-2: 7.2
	Dose Stored [RO-BRTO-II-5]	R	RO TF-2: 3.3

Figure 7.1-1 shows the actors directly involved in the DRRO Profile and the direction that the content is exchanged.

245 A product implementation using this profile may group actors from this profile with actors from a workflow or transport profile to be functional. The grouping of the content module described in this profile to specific actors is described in more detail in Cross Profile Considerations Section 7.6.

250

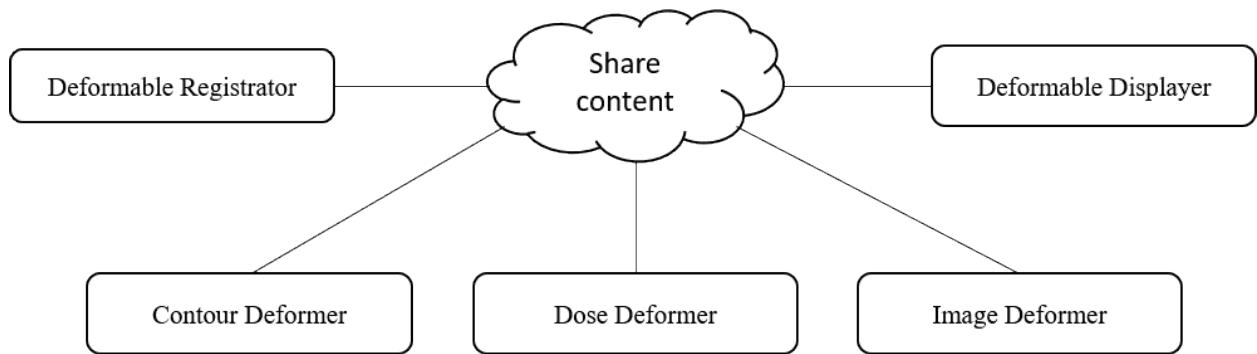

Figure 7.1-2: DRRO Actor Diagram

Table 1-2 lists the content modules defined in the DRRO Profile. To claim support with this profile, an actor shall support all required content modules (labeled “R”) and may support optional content modules (labeled “O”).

255

Table 7.1-2: DRRO – Actors and Content Modules

Actors	Content Modules	Optionality	Reference
Deformable Registrar	Deformable Spatial Registration IOD for General Use	R	RO TF-3: 7.3.11.1
	Frame of Reference Module for Deformable Registrations	R	RO TF-3: 7.4.1.7.1
	Deformable Spatial Registration Module Base Content	R	RO TF-3: 7.4.15.1.1
Deformable Displayer	-	-	-

7.1.1 Actor Description and Actor Profile Requirements

No additional requirements needed.

260

7.2 DRRO Actor Options

Options that may be selected for this profile are listed in Table 7.2-1 along with the actors to which they apply. Dependencies between options when applicable are specified in notes.

Table 7.2-1: DRRO – Actors and Options

Actor	Options	Reference
Deformable Registrar	Structure Set Retrieval [RO-7]	RO TF-2: 3.7
	Spatial Registration-III Retrieval [MMRO-III-2]	RO TF-2: 3.18
Deformable Displayer	Structure Set Retrieval [RO-7]	RO TF-2: 3.7
	Dose Retrieval [RO-BRTO-II-6]	RO TF-2: 3.11
Contour Deformer	No options defined	-
Image Deformer	No options defined	-
Dose Deformer	Structure Set Retrieval [RO-7]	RO TF-2: 3.7

265 **7.3 DRRO Required Actor Groupings**

None.

7.4 DRRO Overview

7.4.1 Concepts

7.4.1.1 Deformable Image Registration (DIR)

- 270 Deformable image registration (DIR) is the process of defining a mapping between the positions in one scan and their corresponding positions in another scan. This permits point-wise merging of information in scans acquired of the same subject at different time points or of different subjects and is of high relevance in many aspects of radiation therapy treatments.
- 275 DIR allows for alignment that accounts for changes such as organ deformation, patient weight loss, or tumor shrinkage. DIR has the perspective of being widely integrated into many different steps of the radiotherapy process including planning, delivery and accumulated dose from radiotherapy. For example, inter-fractional registration can be used to match an image acquired at one treatment fraction to an image from another fraction to improve patient positioning, and to evaluate organ motion relative to bony anatomy. Another particular use is data transfer between images to propagate contours from the planning images or from an atlas to newly acquired images as well as between images of different modalities. Intra-fractional registration is used to match images acquiring during a single treatment fraction. For example, this process is used to track respiratory motion and can be used to generate a model of organ motion across a patient population.
- 280 Once the registration is complete, the result is recorded in a Deformable Spatial Registration object which is typically stored in the study with the image data. The registration is described through a rigid transform, for initial coarse alignment, and a deformation vector field, for subsequent detailed alignment, see Section 7.4.1.2.

290 Many different deformable image registration algorithms exist. The specific algorithm used may be of interest to the user (especially when several different registrations exist between the same datasets). It is therefore relevant that the Deformable Spatial Registration object stores information on the type of algorithm used, for instance if the driving force is image information or fiducial markers in terms of POIs or ROIs.

7.4.1.2 Rigid transform and deformation vector field

295 Deformations and transformations describe how to sample data from the **Source** Reference Coordinate System (RCS) into the **Registered** RCS. The deformable spatial registration is applied to the Registered RCS coordinates by:

1. First, transforming the coordinates using a pre deformation matrix; and
2. Then, applying the deformation offsets to the resulting coordinates.

300 The resulting coordinate addresses the corresponding point within the Source RCS. In other words,

- Each vector describes the displacement of a point in the Registered RCS to spatially align with the corresponding point in the Source RCS, after having been rigidly aligned through a pre deformation matrix; and
- The vector field is defined on the Registered image.

305 Expressed as an equation, a source coordinate can be calculated as:

$$\begin{bmatrix} X_{Source} \\ Y_{Source} \\ Z_{Source} \\ 1 \end{bmatrix} = M_{pre} \begin{bmatrix} X_{Start} + i \cdot X_R \\ Y_{Start} + i \cdot Y_R \\ Z_{Start} + i \cdot Z_R \\ 1 \end{bmatrix} + \begin{bmatrix} \Delta X_{ijk} \\ \Delta Y_{ijk} \\ \Delta Z_{ijk} \\ 0 \end{bmatrix},$$

where $(X \ Y \ Z)_{Source}$ is the spatial coordinate in the Source RCS; $(X \ Y \ Z)_{Start}$ the start coordinate in the Registered RCS of the deformation grid; $(i \ j \ k)$ the index in the deformation grid in the X , Y , and Z dimension; $(X \ Y \ Z)_R$ the resolution of the deformation grid in the X , Y , and Z dimension; $(\Delta X_{ijk} \ \Delta Y_{ijk} \ \Delta Z_{ijk})$ the deformation at index (i, j, k) in the deformation grid; and M_{pre} the pre deformation matrix.

310 Note that a deformation vector field is not, in general, invertible. This is a difference with respect to Spatial Registration object which can be used for rigid alignment in both directions.

315 7.4.1.3 Deforming Images, Contours and Dose

A deformable image registration can be used to create deformed objects.

Contours on the Registered image can be deformed to the Source image following the vector field.

320 The Source image can be deformed to the Registered image and stored as a Deformed image. This allows for instance visualization of the two images fused.

A RT Dose defined on the Source image can be deformed to the Registered image and stored as a Deformed Dose. This allows for instance summation of doses on different images.

7.4.2 Use Cases

7.4.2.1 Use Case #1: Deformable Registration Creation

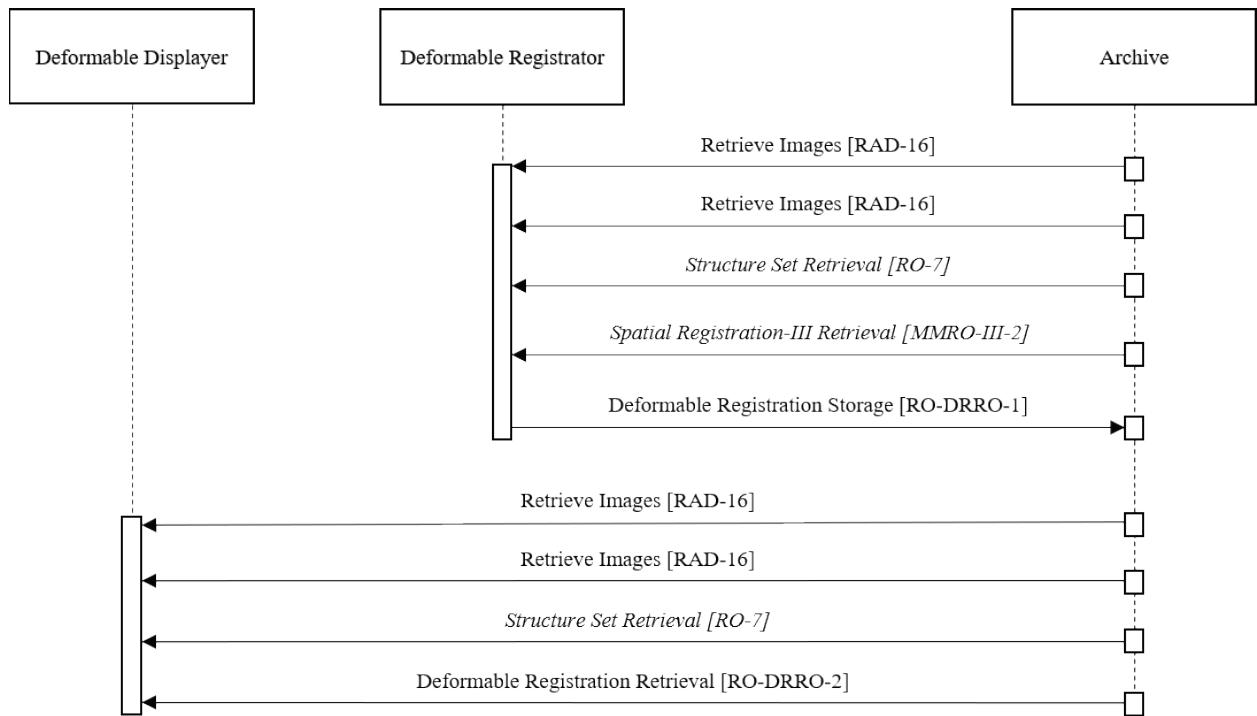

325 A deformable registration is created based on two images in the system.

7.4.2.1.1 Deformable Registration Creation Use Case Description

The Deformable Registrar and some data source (e.g., an Archive) retrieves data and stores a deformable registration.

- Received:
 - Two series of images are retrieved.
 - *Optional A structure set is retrieved.*
- Action:
 - A deformable registration is created from Image R to Image S.
 - Structures (regions and points of interest) can optionally be used in the creation of the deformable registration
- Stored:
 - A Deformable Spatial Registration Object is stored.

7.4.2.1.2 Deformable Registration Creation Process Flow

340

Figure 7.4.2.1.2-1: Process Flow for Deformable Registration Creation

7.4.2.2 Use Case #2: Multimodality Contouring I

The images are visualized in a fusion view (based on the deformable image registration) and used to identify structures (regions and points of interest) in the system.

7.4.2.2.1 Multimodality Contouring I Use Case Description

345

- Received:
 - Two series of images (Image R and Image S) are retrieved.
 - A deformable registration from Image R to Image S is retrieved.
- Action:
 - Deformable Displayer displays a fusion of Image R and Image S using the deformable registration.
 - Deformable Displayer allows identification of structures (regions and points of interests) in the fusion view.

350

- Stored:
 - The structures in Image R are stored.

355 **7.4.2.2.2 Multimodality Contouring I Process Flow**

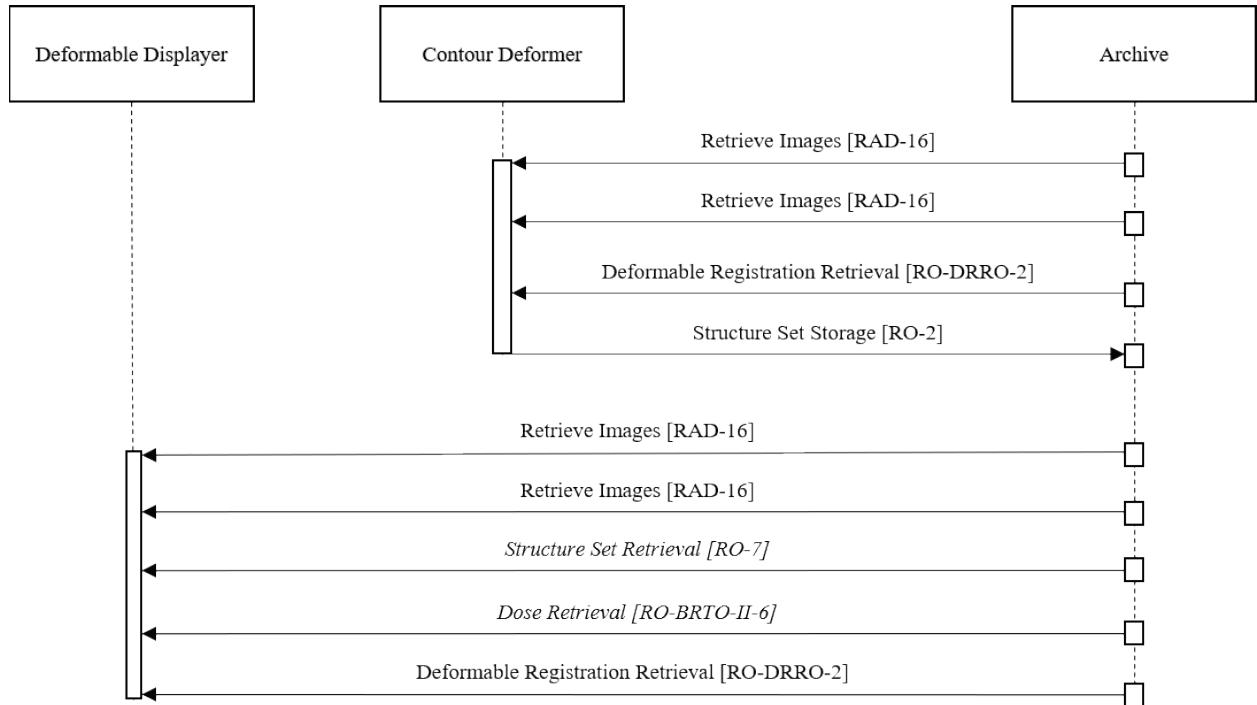

Figure 7.4.2.2.2-1: Process Flow for Multimodality Contouring I

7.4.2.3 Use Case #3: Multimodality Contouring II

The deformable image registration is used to propagate structures between images in the system.

360 **7.4.2.3.1 Multimodality Contouring II Use Case Description**

- Received:
 - Two series of images as CT/MR/PET Image Objects – registered Image R and source Image S.
 - Structures (regions and points of interests) as RT Struct on Image R
 - A deformable image registration from Image R to Image S as Deformable Spatial Registration Object.
- Action: A Contour Deformer Actor allows propagation of the structures from Image R to Image S based on the deformable image registration.

- Stored: The structures in Image S are stored as a RT Struct Object.

370 **7.4.2.3.2 Multimodality Contouring II Process Flow**

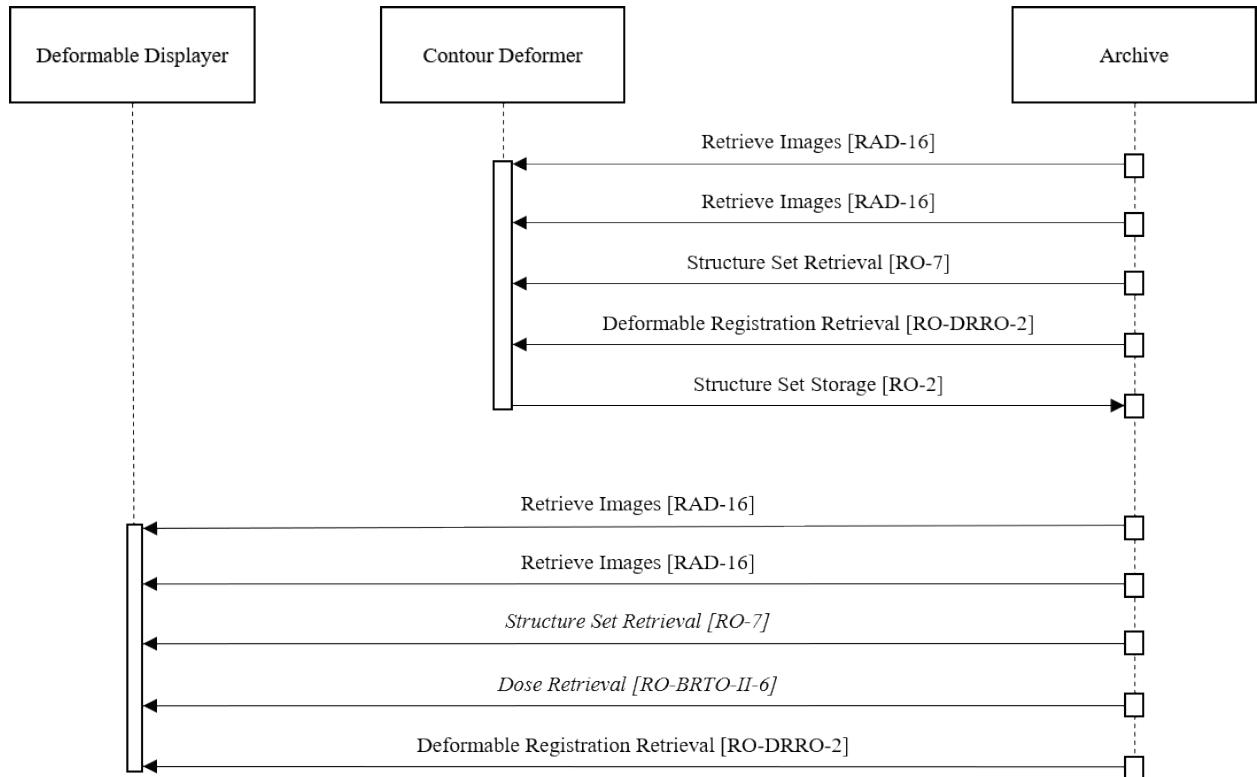

Figure 7.4.2.3.2-1: Process Flow for Multimodality Contouring II

7.4.2.4 Use Case #4: Dose Deformation

375 The deformable image registration is used to map the dose from one image to another in the system.

7.4.2.4.1 Dose Deformation Use Case Description

- Received:
 - Two series of images as CT/MR/PET Image Objects – registered Image R and source Image S
 - A deformable image registration from Image R to Image S as Deformable Spatial Registration Object.
 - A dose on Image S as RT Dose Object.

- 385
- Action: A Dose Actor allows mapping of the dose on Image S to Image R based on the deformable image registration.
 - Stored: The deformed dose is stored as a RT Dose Object in the frame-of-reference and patient orientation as Image R.

7.4.2.4.2 Dose Deformation Process Flow

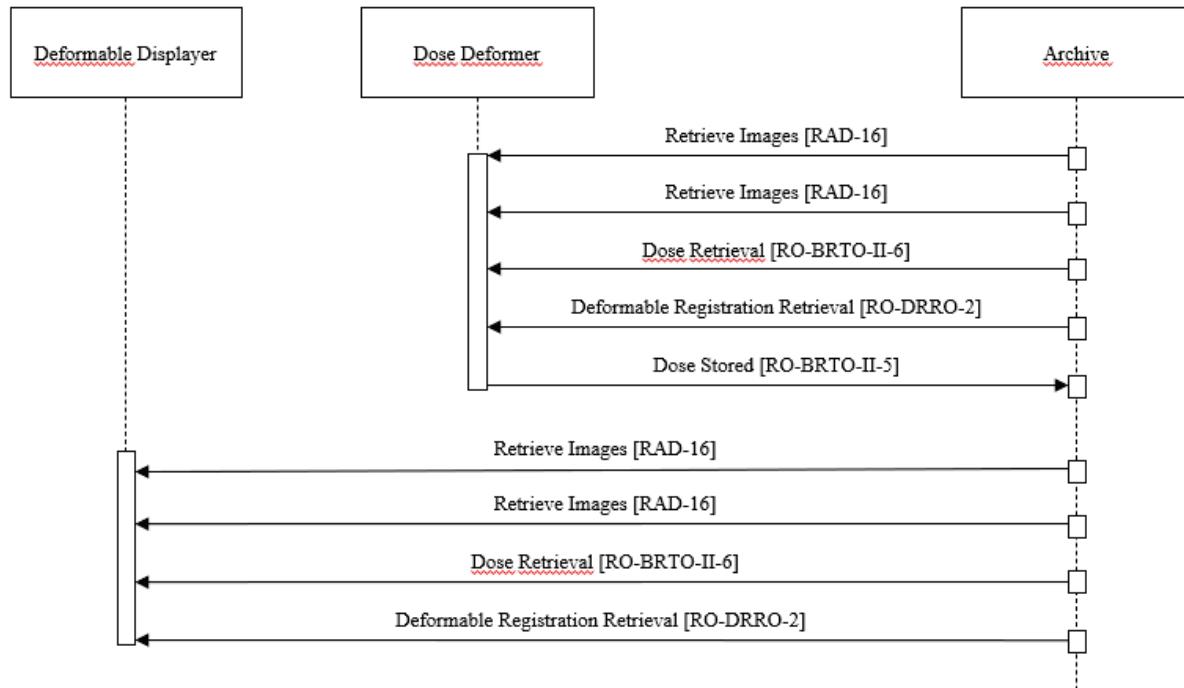

Figure 7.4.2.4.2-1: Process Flow for Dose Deformation

390

7.4.2.5 Use Case #5: Image Deformation

The deformable image registration is used to deform an image in the system.

7.4.2.5.1 Image Deformation Use Case Description

- 395
- Received:
 - Two series of images as CT/MR/PET Image Objects – registered Image R and source Image S
 - A deformable image registration from Image R to Image S as Deformable Spatial Registration Object.

- Action: An Image Actor allows deforming Image R to Image S based on the deformable image registration.
- 400
 - Stored: The deformed image is stored as a CT/MR/PET Image Object, where the geometrical information corresponds to Image R:
 - Image acquisition information corresponds to Image S.
 - Reference to Deformable Spatial Registration Object
 - Referenced Image (Image S)
 - Dates and time taken from Image S
- 405

7.4.2.5.2 Image Deformation Process Flow

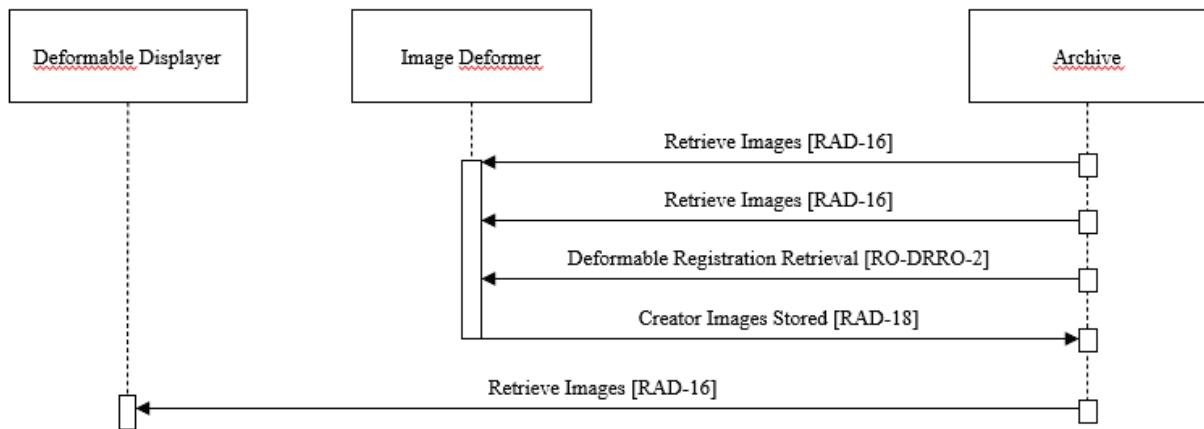

Figure 7.4.2.5.2-1: Process Flow for Image Deformation

7.4.2.6 Use Case #6: Image Distortion Correction

- 410 The deformable image registration is used to deform an image in the system. Applicable, e.g., for phantom based geometrical correction of MRI images where a displacement field which may not be patient-specific is used.

7.4.2.6.1 Image Distortion Correction Use Case Description

- Received:
 - One series of images as CT/MR/PET Image Object – source Image S
 - A displacement field to Image S as Deformable Spatial Registration Object.
- Action: An Image Actor deforms Image S based on the displacement field.
- Stored: The deformed image is stored as a CT/MR/PET Image Object, where:

- 420
- Image acquisition information corresponds to Image S.
 - Reference to Deformable Spatial Registration Object
 - Referenced Image (Image S)
 - Dates and time taken from Image S

7.4.2.6.2 Image Distortion Process Flow

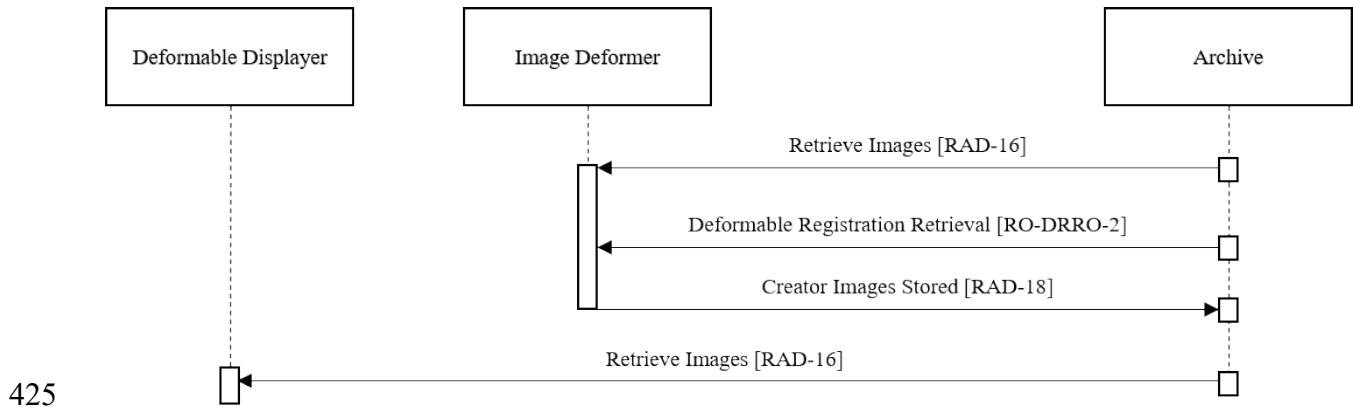

Figure 7.4.2.6.2-1: Process Flow for Image Deformation

7.5 DRRO Security Considerations

There are no explicit security considerations in this profile.

430

7.6 DRRO Cross Profile Considerations

Consistent Presentation of Images (CPI) – Consistent Presentation of Images Integration Profile

Actors of the DRRO Profile uses the Retrieve Images [RAD-16] and Creator Images Stored [RAD-18] transactions defined by the CPI Profile (RAD TF-1: 5).

435

BRTO-II – Basic Radiation Therapy Objects Integration Profile II

A Contourer in BRTO-II might be grouped with a Deformed Contourer to support a rich suite of contouring tools.

440 **MMRO-III - Multimodality Image Registration for Radiation Oncology 2018**

A Registrator in MMRO-III might be grouped with a Deformable Registrator to support both spatial registration and deformable registration.

A Registered Display in MMRO-III might be grouped with a Deformable Display to support display of spatial registrations and deformable registrations.

445 A Registered Dose Display in MMRO-III might be grouped with a Deformable Display to support display of registered dose.

A Registered Contourer in MMRO-III might be grouped with a Deformable Contourer to support spatial registration of contours and deformable registration of contours.

450

Volume 2 – Transactions

3.X Deformable Registration Storage [RO-DRRO-1]

3.X.1 Scope

3.X.2 Actor Roles

Actor:	Deformable Registrar
Role:	Create and transmit Deformable Spatial Registration Objects

3.X.3 Referenced Standards

455 DICOM 2020d Edition PS 3.3

3.X.4 Messages

3.X.4.1 Storage of Deformable Registration

3.X.4.1.1 Trigger Events

460 The Deformable Registrar retrieves images (Images S and Images R) and creates a Deformable Spatial Registration instance.

3.X.4.1.2 Message Semantics

The following actions and transmissions are expected:

1. Retrieve image series Images S
2. Retrieve image series Images R
- 465 3. Process images and create deformable registration
4. Store deformable registration

The content of the deformable registration shall conform to the content module definition 7.3.11 Deformable Spatial Registration IOD in RO TF-3.

3.X.4.1.3 Expected Actions

470 The Deformable Registrar processes the image series Images S and Images R and creates a Deformable Spatial Registration instance.

3.Y Deformable Registration Retrieval [RO-DRRO-2]

3.Y.1 Scope

3.Y.2 Actor Roles

Actor:	Deformable Displayer
Role:	Retrieve Deformable Spatial Registration Objects For Display
Actor:	Contour Deformer
Role:	Retrieve Deformable Spatial Registration Objects To Deform Contours
Actor:	Image Deformer
Role:	Retrieve Deformable Spatial Registration Objects To Deform Images
Actor:	Dose Deformer
Role:	Retrieve Deformable Spatial Registration Objects To Deform Dose

475

3.Y.3 Referenced Standards

DICOM 2020d Edition PS 3.3

3.Y.4 Messages

3.Y.4.1 Retrieval of Deformable Registration

480 **3.Y.4.1.1 Trigger Events**

The Deformable Displayer retrieves Images (Images S, Images R), Structure Set (optional), Dose (optional), and a Deformable Spatial Registration instance.

3.Y.4.1.2 Message Semantics

The following actions and transmissions are expected:

- 485
1. Retrieve image series Images S
 2. Retrieve image series Images R
 3. Retrieve Structure Set (optional)
 4. Retrieve Dose (optional)
 5. Retrieve Deformable Spatial Registration

490

3.Y.4.1.3 Expected Actions

The Deformable Displayed processes the image series Images S and Images R and Deformable Spatial Registration instance. Optionally it applies the registration on the retrieved structure set and dose.

495

IHE Radiation Oncology Technical Framework Supplement – Deformable Registration in Radiation Oncology (DRRO)

Attribute	Tag	Type	Attribute Note
Deformable Registration Sequence	(0064,0002)	R+*	Exactly two Item shall be present. One Item shall represent the Registered Image (with no Deformable registration grid sequence). The other Item shall represent the Source Image and shall have a Deformable Registration Grid Sequence
>Source Frame of Reference UID	(0064,0003)	-	Identifies a Frame of Reference that may or may not be an image set. Shall be present.
>Referenced Image Sequence	(0008,1140)	O+*	Shall be Empty or shall include one Item within the specified Source Frame of Reference UID (0064,0003)
>>Include 'Image SOP Instance Reference Macro' Table 10-3			
>Frame of Reference Transformation Comment	(3006,00C8)	-	
>Registration Type Code Sequence	(0070,030D)	R+	Shall be present and include one of the items in CID 7100 RCS Registration Method Type.
>Code Value	(0008,0100)	R+*	Shall be one of ‘125022’ (Fiducial Alignment), ‘125024’ (Image Content-based Alignment) or ‘125026’ (Image Content and Fiducial Based Alignment) for the Source Image. Shall be ‘125021’ (Frame of Reference Identity) for the Registered Image.
>Code Scheme Designator	(0008,0102)	R+*	Shall be ‘DCM’
>Code Meaning	(0008,0104)	R+*	Shall be the Code Meaning corresponding to the value in Code Value (0008,0010) as specified in CID 7100
>Pre Deformation Matrix Registration Sequence	(0064,000F)	RC+	Shall include one Item for the Source Image in case a matrix transformation needs to be applied prior to deformation. In case this Item is absent the identity transformation matrix shall be applied. Shall be absent for the Registered Image
>>Frame of Reference Transformation Matrix	(3006,00C6)	-	
>>Frame of Reference Transformation Matrix Type	(0070,030C)	R+	Shall be RIGID
>Post Deformation Matrix Registration Sequence	(0064,0010)	R+	If present shall be the identity transformation matrix.
>Deformable Registration Grid Sequence	(0064,0005)	RC+	Shall be present for Source Image and shall be absent for Registered Image.
>>Image Orientation (Patient)	(0020,0037)	R	
>>Image Position (Patient)	(0020,0032)	R	
>>Grid Dimensions	(0064,0007)	R	
>>Grid Resolution	(0064,0008)	R	
>>Vector Grid Data	(0064,0009)	R*	‘NaN’ values shall be allowed. Consuming actors must handle ‘NaN’ values safely.
>Used Fiducials Sequence	(0070,0314)	-
